

Application Brief - 360 Panel Circuit Breaker Module Offers Broadest Amperage Range Selection

[Click to read an overview of the 360 Panel System.](#)

The new 360 Panel System makes it possible for boaters to install circuit breakers ranging from 5 to 300 Amperes in the same size aperture (5 to 100A breaker requires 1 aperture, 200A requires 2 apertures, 300A requires 3 apertures). For example, customers can install one 100 Ampere Main breaker with two 30 Ampere and one 15 Ampere Branch circuit breakers in the same module. The 360 Panel System circuit breaker module offers flexibility in many other ways. Modules can be configured for AC or DC applications, there is a choice of three popular circuit breaker actuators, and one, two and three poles. This versatility makes a module, and the 360 Panel System, able to support the widest range of marine applications.

Features

- Up to 4 circuits per module
- Can have main and branch circuits in one module
- More than 500 circuit labels available

Actuator Style	DC Rating	AC Rating	Poles
Toggle	5-50A	5-50A	Single, double
Flat Rocker	5-300A	5-100A	Single, double, triple
Slot Trip Flat Rocker	5-50A	5-50A	Single

Circuit breaker modules can be part of a:

- Comprehensive panel (below left)
- Circuit breaker panel with 4, 8, 12, 16, ... circuits (below right, example of panel with 4 circuits)

Comprehensive panel

Circuit breaker panel
(4 circuits)

These circuit breaker modules are three of nine currently available modules, including a Push Button Reset only circuit breaker module. Nine more modules are in design.
