Blue Sea Systems Ultrasonic Tank Senders for use with Vessel Systems Monitor VSM 422

Blue Sea Systems introduces new Ultrasonic Tank Senders designed exclusively for use with the Vessel Systems Monitor VSM 422. These innovative senders can be used with a wide range of tank depths and shapes, eliminating the long lead time and high cost associated with custom-order ultrasonic senders. The versatility of these senders allows OEMs and distributors to stock only two distinct part numbers to cover many tank level monitoring needs.

“Although most tank senders on the market today will work with the VSM 422, the Blue Sea Systems Ultrasonic Tank Senders are the optimal solution,” said David Johnson, Senior Vice President for Sales and Marketing for Blue Sea Systems. “The VSM 422’s precise auto-calibration procedure and advanced anti-slosh technology give the boater unprecedented accuracy even when the senders are used with complex tank shapes.”

The Blue Sea Systems Ultrasonic Tank Senders use the same SAE five-bolt pattern as resistive senders, allowing them to be used as a direct replacement for resistive senders. With no moving parts to wear out, arms to adjust, or small parts to lose, installation is straightforward. Blue Sea Systems Ultrasonic Tank Senders are available now for diesel, water, and waste tanks, as well as gasoline tanks.

Blue Sea Systems was founded in 1992 based on a commitment to create innovative high quality marine electrical products to improve the safety, simplicity, and reliability of boating. Blue Sea Systems employees are active boaters who apply their passion to designing, developing, and building products that enhance the experience of boaters.
