## **Blue Sea Systems Presents its New 360 Panel System**

In its quest to create the ideal marine electrical panel, Blue Sea Systems embarked on an extensive collaborative effort with their worldwide customer base of boat builders and electrical suppliers. In response to the input they received, Blue Sea Systems developed its new 360 Panel System. This panel system has a unique open architecture design which allows the company to build marine electrical panels for every customer's unique needs. The new panel system enables customers to have the AC and DC power management and monitoring functionality that they want.

The new 360 Panel System has standard panels that customers can choose from, or customers can design their own from a variety of modules— analog and digital meters, gauges, circuit breakers, battery switches, AC source selector switches, mimic panels, with more to come. Four circuit breaker actuator styles are available—toggle, raised rocker, flat rocker, and push button. Circuit breaker current ratings from 1A to 250A can be used in the same panel. With the new 360 Panel System, customers get the panel that they want, at a price that is similar to standard panels, and delivered in days not weeks.

The attractive design of the 360 Panel System is timeless and will enhance the interior of a classic wooden trawler or a modern yacht. All panel circuits have backlit labels that are easy to change from the front of the panel without removing bezels or screws. LED indicators show circuit ON status.

Future modifications to the panel are now possible so boat builders and dealers can easily make changes in the field. The 360 Panel System can grow with customers—as needs change, modules can be swapped out. As new customer needs for functionality are identified, new modules will be developed to meet those needs.

The 360 Panel System and all of Blue Sea Systems' marine electrical products are built to last. The company was founded in 1992 based on a commitment to create innovative high quality marine electrical products designed to improve the safety, simplicity, and reliability of boating. Blue Sea System employees are active boaters who apply their passion to designing, developing, and building great products that will enhance the experience of boaters.
